Michael Graves + Associates

**Academic Appointments**

Adjunct Lecturer  
City University of New York  
Architectural Technology  
Program

**Professional Affiliations**

American Institute of  
Architects

The Architecture League of  
New York

David Kubik joined BKSK in 2003, and was named an Associate Partner in 2016. He plays a strong role in the design of both institutional and development projects, and is known for his attention to details in both custom interior work and base building new construction. David is experienced at successfully managing large consultant teams on complex institutional projects.

David arrived at a career in Architecture through interests in the fine arts and naval architecture. His varied interests and ever evolving appreciation for the craft in building has driven him to study and understand a project's surroundings and strive to draw from these surroundings for informed, thoughtful design. David's process includes both the use of the newest technologies and hand drawings in order to complete a design study.

For David, a successful building is both an expression of and an enhancement of its community. The open visual design of the Maimonides Lobby achieves this through its celebration of the diverse population that Maimonides medical center serves, while also providing an organized and efficient entrance to the hospital. The carefully considered details on the facade of 77 Reade Street is another example of a modern building paying homage to its landmarked district while also providing a glimpse to the future.

David graduated from the University of Maryland with a Master of Architecture and a Bachelor of Science in Architecture. He has received an Award for Excellence in Design and Fellowships at both the Graduate and Baccalaureate levels, as well as a Thesis Citation. David taught design studio as an adjunct lecturer in the Architectural Technology program at the City University of New York.
